The Model 100 is a single-tube unit that can be installed in ductwork utilizing the pre-drilled flange and factory applied gasket. The installer makes a duct cut out and secures the unit with self-tapping sheet metal screws. The unit can also be installed inside an HVAC unit utilizing a contractor supplied mounting bracket. Power to the ionization unit should be interlocked with system fan operation. The power input fitting provides easy disconnection of the power supply for servicing the unit. A five position ion level control knob varies the ion output between 50% and 100%.
